

Example Output Structure

Input (Read)

config.yaml  
*Feature definitions,  
batch\_size, num\_workers*

data/keyframes/{video\_id}/  
*\*.jpg keyframe images*

data/video\_clips/{video\_id}/  
*\*.mp4 short clips*

GlobalConfig.get()

Read config → get feature  
list

Instantiate  
FeatureExtractor

Filter keyframes  
*(skip already extracted)*

Scan keyframes → get  
video\_ids

ImageCLIP.require\_input()  
OCR.require\_input()

Run get\_features()

Save numpy arrays

np.save()

Output (Write)

features/{video\_id}/{frame\_id}/  
*{feature\_name}.npy*

AnalyseCommand

glob dirs

VideoCLIP.require\_input()
